

Super Disks

If submitting initiating documents on disk for the District of Minnesota, the documents cannot be submitted on the newer "super disks." The computers in the District of Minnesota do not have a way to read the information on a super disk. The initiating documents can be submitted on a 3.5 floppy disk or a CD ROM. The media used and the documents submitted should not have any extra security features selected or should not be set as a "read only" document. The Court is unable to work with documents or media with these extra security features turned on.
